Pointer to pointers

```
char **marker;  
char  
course[0]="numerical",course[1]="methods";  
marker=&course[0];  
pointer to course[0] which points to  
"numerical"  
marker++;  
points to course[1] which points to "m" in  
"methods"  
(*marker)++ will then point to "e"
```
